Task Description

We will create a Django CLI application to re-write property information using Ollama.

Task Breakdown

1. Use any model from Ollama
2. Read property title, and description and prepare a prompt to re-write title and description using selected Ollama model
3. Store that information back to the property table you have
4. Create another table with fields below
   a. property_id
   b. summary
5. Generate summary by passing all the property related information you have scrapped using Ollama model you selected and save into the table.
6. Generate property rating and review using LLM Model and store to a new table
   a. property_id
   b. rating
   c. review

Acceptance criteria

1. Use Django CLI
2. Use postgres
3. Use Django ORM
4. Use Ollama Model is must
5. Ensure 90% Code coverage
6. Must send a Github repo link which is public and contains a README.md with the guideline to use the project and all useful information required.
7. No cheating, will be disqualified
